# Contents Volume 196 (1997)

**$N_2$-fixation ability of Brazilian soybean cultivars with *Sinorhizobium fredii* and *Sinorhizobium xinjiangensis***
L.M. de O.Chueire and M. Hugria 1–5

**Methane and nitrous oxide emissions from rice paddy fields as affected by nitrogen fertilisers and water management**
Z. Cai, G. Xing, X. Yan, H. Xu, H. Tsuruta, K. Yagi and K. Minami 7–14

**Chemical transformation, phytotoxicity and nutrient availability in progressive composting stages of wheat straw**
M.-J. Blanco and G. Almendros 15–25

**Interactions between the root-knot nematode *Meloidogyne incognita* and *Glomus mosseae* in banana**
M.C. Jaizme-Vega, P. Tenoury, J. Pinochet and M. Jaumot 27–35

**Nitrate induced iron deficiency chlorosis in *Juncus acutifloris***
A.J.P. Smolders, R.J.J. Hendriks, H.M. Campschreur and J.G.M. Roelofs 37–45

**High temperature effects on photosynthesis and water relations of grain legumes**
G.K. McDonald and G.M. Paulsen 47–58

**Analysing the performance of a micro soil solution sampling device in a laboratory examination and a field experiment**
A. Spangenberg, G. Cecchini and N. Lamersdorf 59–70

**Iron deficiency induces cluster (proteoid) root formation in *Casuarina glauca***
M. Arahou and H.G. Diem 71–79

**Allocation of carbon in a mature eucalypt forest and some effects of soil phosphorus availability**
H. Keith, R.J. Raison and K.L. Jacobson 81–99

**Biomass accumulation and allocation in soybean associated with genotypic differences in tolerance of nitrogen fixation to water deficits**
L.C. Purcell, M. de Silva, C.A. King and W.H. Kim 101–113

**Effect of soil nitrogen, carbon and moisture on methane uptake by dry tropical forest soils**
J.S. Singh, Smita Singh, A.S. Raghubanshi, Saranath Singh, A.K. Kashyap and V.S. Reddy 115–121

**Apatite as a P source in mycorrhizal and non-mycorrhizal *Pinus sylvestris* seedlings**
H. Wallander, T. Wickman and G. Jacks 123–131

**Short-term effects of a dung pat on $N_2$ fixation and total N uptake in a perennial ryegrass/white clover mixture**
F.V. Jørgensen and E.S. Jensen 133–141

**Hydroponic culture of the mycorrhizal fungus *Glomus mosseae* with *Linum usitatissimum* L., *Sorghum bicolor* L. and *Triticum aestivum* L.**
H.-J. Hawkins and E. George **143–149**

**Spatial variability of soil total C and N and their stable isotopes in an upland Scottish grassland**
C.A. Marriott, G. Hudson, D. Hamilton, R. Neilson, B. Boag, L.L. Handley, J. Wishart, C.M. Scrimgeour and D. Robinson **151–162**

**PLANT NUTRITION FOR SUSTAINABLE FOOD PRODUCTION AND ENVIRONMENT**

Proceedings of the XIII International Plant Nutrition Colloquium,
13–19 September 1997, Tokyo, Japan

Guest editors: T. Ando[1], K. Fujita[1], T. Mae[2], H. Matsumoto[3], S. Mori[4] and J. Sekiya[5]
[1] *Hiroshima University, Higashi Hiroshima, Japan*, [2] *Tohoku University, Sendai, Japan*,
[3] *Okayama University, Kurashiki, Japan*, [4] *University of Tokyo, Tokyo, Japan*,
[5] *Kyoto University, Kyoto, Japan*

**Plant nutrition in the 20th and perspectives for the 21st century**
J.F. Loneragan **163–174**

**Application of microinjection techniques to plant nutrition**
W.J. Lucas **175–189**

**Regulation of mineral nitrogen uptake in plants**
N. von Wirén, S. Gazzarrini and W.B. Frommer **191–199**

**Physiological nitrogen efficiency in rice: Nitrogen utilization, photosynthesis, and yield potential**
T. Mae **201–210**

**Does boron play only a structural role in the growing tissues of higher plants?**
P.H. Brown and H. Hu **211–215**

**Significance of N source (urea vs. $NH_4NO_3$) and Ni supply for growth, urease activity and nitrogen metabolism of zucchini (*Cucurbita pepo* convar. *giromontiina*)**
J. Gerendás and B. Sattelmacher **217–222**

**Reevaluating the free-ion activity model of trace metal availability to higher plants**
D.R. Parker and J.F. Pedler **223–228**

**Possible role of root-ethylene in Fe(III)-phytometallophore uptake in Strategy II species**
R.M. Welch, W.A. Norvell, P. Gesuwan and S. Schaefer **229–232**

**Detection and characterization of nitrogen circulation through the sieve tubes and xylem vessels of rice plants**
H. Hayashi, Y. Okada, H. Mano, T. Kume, S. Matsuhashi, N. S-Ishioka, H. Uchida and M. Chino **233–237**

**Isolation and patch clamp measurements of xylem contact cells for the study of their role in the exchange between apoplast and symplast of leaves**
M. Keunecke, J.U. Sutter, B. Sattelmacher and U.P. Hansen **239–244**

**The *froh* gene family from *Arabidopsis thaliana*: Putative iron-chelate reductases**
N.J. Robinson, Sadjuga and Q.J. Groom **245–248**

**Role of rye chromosomes in improvement of zinc efficiency in wheat and triticale**
I. Cakmak, R. Derici, B. Torun, I. Tolay, H.J. Braun and R. Schlegel **249–253**

**Root exudation and microflora populations in rhizosphere of crop genotypes differing in tolerance to micronutrient deficiency**
Z. Rengel **255–260**

**Phosphorus deficiency enhances root exudation of low-molecular weight organic acids and utilization of sparingly soluble inorganic phosphates by radish *Raghanus sativus* L.) and rape (*Brassica napus* L.) plants**
F.S. Zhang, J. Ma and Y.P. Cao **261–264**

**The role of cell wall components from groundnut roots in solubilizing sparingly soluble phosphorus in low fertility soils**
N. Ae, T. Otani **265–270**

**Accumulation and transport of nickel in relation to organic acids in ryegrass and maize grown with different nickel levels**
X.E. Yang, V.C. Baligar, J.C. Foster and D.C. Martens **271–276**

**Genetic improvement of heavy metal tolerance in plants by transfer of the yeast metallothionein gene (*CUP1*)**
I. Hasegawa, E. Terada, M. Sunairi, H. Wakita, F. Shinmachi, A. Noguchi, M. Nakajima and J. Yazaki **277–281**

**Genetic and physiological analysis of doubled-haploid, aluminium-resistant lines of wheat provide evidence for the involvement of a 23 kD, root exudate polypeptide in mediating resistance**
U. Basu, J.L. McDonald-Stephens, D.J. Archambault, A.G. Good, K.G. Briggs, Taing-Aung and G.J. Taylor **283–288**

**Phosphorus acquisition and cycling in crop and pasture systems in low fertility tropical soils**
D.K. Friesen, I.M. Rao, R.J. Thomas, A. Oberson and J.I. Sanz **289–294**

**Nitrate-uptake capacity of different root zones of *Zea mays* (L.) in vitro and in situ**
G. Reidenbach and W.J. Horst **295–300**

**Growth stimulatory substances for vesicular-arbuscular mycorrhizal fungi in Bahia grass (*Paspalum notatum* Flügge.) roots**
T. Ishii, A. Narutaki, K. Sawada, J. Aikawa, I. Matsumoto and K. Kadoya **301–304**

**Transport processes at the plant-fungus interface in mycorrhizal associations: physiological studies**
S.M. Ayling, S.E. Smith, F.A. Smith and P. Kolesik **305–310**

**Root colonization and iron nutritional status of a *Pseudomonas fluorescens* in different plant species**
P. Marschner, D.E. Crowley and B. Sattelmacher **311–316**

**Molecular markers linked to genes underlying seedling tolerance for ferrous iron toxicity**
P. Wu, A. Luo, J. Zhu, J. Yang, N. Huang and D. Senadhira **317–320**

**How do nutrients drive growth?**
I.G. Burns, R.L. Walker and J. Moorby **321–325**

**Volume contents** **327–330**

**Author index** **331–332**

**Instructions to authors** **333–335**
